5,000,000

Nature of Firm's Responsibilities
Computer model studies

Owner
The National D-Day Museum

Date of Completion
2000

The Normandy Beaches Exhibit

The Outbreak of World War II Exhibit

Preparing for Invasion

Working together with Chermayeff & Geismar, our firm assisted in the development of this new museum in New Orleans, home of the factories that produced the landing craft used to transport allied troops to the beaches of Normandy during the invasion of Europe during World War II.

Computerized models of all exhibit areas were made to better communicate concepts for the conversion of an existing 20,000sf factory building. These virtual images also helped the museum to build local support, create a national membership, and raise funds for the first phase of construction.
